

Consortium for Electric Reliability Technology Solutions
Berkeley 2005 Symposium on Microgrids
June 17, 2005
UC Berkeley Faculty Club, Berkeley CA

Participant Contact Information and Research Activities

Name	<i>Alfred Engler</i>
Affiliation	<i>ISET e. V.</i>
Contact Information	Email: aengler@iset.uni-kassel.de Phone: +49 561 7294 222 Address: Königstor 59, 34119 Kassel, Germany
What is your working definition of a microgrid? How is it different from the following working definition? A microgrid is an integrated power delivery system consisting of interconnected loads and DER which, as an integrated system, can operate in parallel with the grid or in an intentional island mode. The integrated DER are capable of providing sufficient and continuous energy to a significant portion of the internal demand, and the microgrid possesses independent controls and can island and reconnect with minimal service disruption. <i>Providing energy to critical internal demand with no service disruption.</i>	
Briefly describe your research activities on microgrids. <i>Microgrids layout and control of power electronics; taking part in the European project "Microgrids".</i>	
Please note which of the following technical issues your research addresses (if any):	
Intentional islanding and resynchronization	Yes
Protection within the microgrid	Yes
Voltage control within the microgrid	Yes
Frequency control within the microgrid during islanded operation	Yes
Fast load sharing among microsources (for load changes faster than the ramping rates of the prime movers)	Yes

Heat load matching and load prioritization	Yes
Economic dispatch of assets	Yes
Meeting environmental constraints	Yes
Other	<i>Please be specific</i>
